                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                          Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of the production of new marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lyaphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 305;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 94; DB 21;

                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                     Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells \, \,^{\circ}

This sequence is the heavy chain variable region of a preferred anti-CD4 monoclonal antibody for use in the claimed synergistic composition. MAD WT 3.10 is deposited as clone 3.101/SB10 (ECACC 90090702). The anti-CD4 antibody is used with at least one anti-ILZR alpha or beta antibody. Individually the antibodies are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response.
                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                    This invention describes novel peptides derived from a framework region of the variable domain of an antibody for detection, immunotherapy or for scintigraphs. The peptides of the invention are used in a method to detect analytes in a sample by eliminating interference in the sample. AAY51254-Y51267 represent peptides derived from the framework regions of the variable domain of an antibody which are used to illustrate the

                                                                                 The present sequence is the heavy chain variable region of the group 4b2 putative consensus anti-DNA monoclonal antibody (MAb), which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairph. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephritis and systemic lupus erythematosus. It can also be
Anti-DNA antibody which specifically binds DNA hairpin - useful to develop prods. for diagnosis and treatment of disorders, e.g. glomerulonephritis or systemic lupus erythematosus
                                                                                                                                                                                   used to generate reagents to screen for pharmaceutical agents, and treat and/or prevent an above disorder.
The sequence was derived by aligning homologous anti-DNA MAD, whose sequences have been published as well as several MAD of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Single chain antibody, antibody, epidermal growth factor receptor; EGFR; tumour; cancer; glioma; melanoma; carcinoma; diagnosis; assessment; phage antibody library.

used for diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical compostion for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. (See AAT04011-T04026 and

Application US/08713939A
Patent No. 5846533
CENERAL INFORMATION:
APPLICANT: Pursiner, Stanley B.
APPLICANT: Williamson, R. Anthony
APPLICANT: Burton, Dennis R.
TITLE OF INVENTION: ANTIBODIES SPECIFIC FOR NATIVE PrP
NUMBER OF SEQUENCES: 86
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
STREET: 2200 Sand Hill Road
                                                     GENERAL INFORMATION:
APPLICANT: RYDak, Susanna M.
APPLICANT: Newton, Dianne L.
APPLICANT: Boque, Lluis
APPLICANT: Miodawer, Alexander
TITLE OF INVENTION: Recombinant Ribonuclease Proteins
NUMBER OF SEQUENCES: 64
                                                                                                                                                                                                                                                                                                       ZIP: 94111-3834

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived complementarity determining the compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived complementarity determining the complementarity determinin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells
application for drugs. It is highly safe in human dose. Sequences AAX59256-58 represent the complementarity determining region (CDR)-1, CDR-2 and CDR-3 fragments in the H chain variable region of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the H chain variable region of the antibody 4H5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ó
                                                                                                                                                                                                                                                This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents a H chain fragment of the antibody 4H5.
                                                                                                                                                                        Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel device (I) for separating cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó

                                                                                                                                                                                                                                                                                                                                                                  0;
                                                                              Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoletic undifferentiated cells, elimination of Lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                   Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells

                                                                                                                                                                                                                                                                                                                                                                The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the H chain sequence of the antibody 4H5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the L chain sequence of the antibody 4H5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                         Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                                                                                                                                                                                                                                                                             Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells \,^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hepatitis B virus; virucide; immunomodulator; hepatotropic; HBV; antiinflammatory; HBV core antigen; HBcAg; HBV E antigen; HBeAg; B cell mediated processing; T cell proliferation; cytokine production;

The invention relates to an isolated or purified peptide (I) which binds Hepatitis B virus (HBV) core antigen (HBCAG) or HBV E antigen (HBCAG).

(I) is useful for treating or preventing Hepatitis B virus (HBV).

(I) is useful for treating or preventing Hepatitis B virus (HBV).

(I) is also useful

for determining the presence of HBV in a biological sample, and for inhibiting B cell mediated processing and uptake of HBCAG and/or HBEAG, by determining whether (I) inhibits B cell mediated processing and protessing and assay of T cell

or proliferation or cytokine production. (I) is also useful for modulating an immune system response. (I) is useful as a template for a design of synthetic molecules including peptides, derivatives or modified peptides, coll, diagnostic reagent and as active ingredient in pharmaceuticals.

(I) is also useful as detection reagents in conventional collogical sample, and to determine the efficacy of an HBV treatment placed and to determine the efficacy of an HBV treatment processing the levels of HBCAG and/or HBBAG during and after antigen (HBCAG) or HBV E antigen (HBCAG) binding partners as described in the invention
                                                                                                                                                                                            Novel peptide that binds to hepatitis B virus core or E antigen, useful for treating and preventing hepatitis B virus infection .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiinflammatory; HBV core antigen; HBcAg; HBV E antigen; HBcAg;

The invention relates to an isolated or purified peptide (1) which binds Hepatitis B virus (HBV) core antigen (HBCAG) or HBV E antigen (HBCAG).

(1) is useful for treating or preventing Hepatitis B virus (HBV).

(2) infection, by identifying a subject in need of a molecule that inhibits infection, and providing the subject with (1). (1) is also useful for determining the presence of HBV in a biological sample, and for inhibiting B cell mediated processing and uptake of HBCAG and/or HBCAG.

(3) by determining whether (1) inhibits B cell mediated processing and uptake of HBCAG and/or HBCAG.

(4) by determining whether (1) inhibits B cell mediated processing and uptake of HBCAG and/or HBCAG.

(5) by determining whether (1) inhibits B cell mediated processing and proliferation or cytokine production.

(6) proliferation or cytokine production.

(7) is also useful as a template for a design of synthetic molecules including peptides, derivatives or modified peptides, peptidomimetics and chemicals.

(1) is also useful as detection reagents in conventional impunchistochemical techniques, as diagnostic reagents to detect HBV in biological sample, and to determine the efficacy of an HBV treatment biological sample, and to determine the efficacy of an HBV treatment processing and in the invention.
